

Metalon Environmental Policy 2025

At Metalon we care about the future of the region and about our impact on the environment. As a company, we take many precautions to reduce this impact and pride ourselves working in an ethical manner.

The majority of our products are made on site in Dunedin, so they travel a shorter distance to reach our clients, requiring less transport. They are quality built and long lasting, which reduces the need for replacement. Metalon also encourages and offers furniture refurbishment and repairs. This is a large part of our business and is one of the biggest differences between us and our competitors.

We source board, timber and paper from sustainable forest sources and any waste is recycled or disposed of by licensed contractors.

We only recommend and specify sustainable products to our customers.

We also respect the environment through our active waste minimization and energy efficiency programme, which includes recycling our packaging as well as using reusable packaging such as blankets. We offer many eco-friendly fabrics that utilise recycled plastic feedstock and recycled wool.

Most of our products are made on site in Dunedin, so they travel a shorter distance to reach our clients, requiring less transport.

Metalon encourages and offers furniture refurbishment and repairs. This is a large part of our business and is the biggest difference between us and our competitors.

Our products are also quality built and long lasting, creating a smaller environmental footprint.

We encourage our staff to cycle to work by providing indoor bicycle parking, which is used by staff on a regular basis.

We measure our carbon footprint to actively reduce our emissions.
